Engine Cooling **Water Pumps**

Catalogue

Jan. 2023

30 Years of Experience

in manufacturing quality water pumps as per OE standards

An ISO 9001:2008 Certified Co.

Vikas Rawal
Managing Director

Vasu Rawal
Quality Head
B.Tech (ME)

From the Board of **DIRECTORS**

The 'Legacy' of a product is never defined by who sells it but by its performance, besides the services of the team behind it. At '**MK Gold**'-the Engine cooling water pump, is not just a product. It is the name behind which a team of competent employees work tirelessly to ensure consumer satisfaction. We have ensured that 'QUALITY' is the driving word behind each step, right from procurement of raw material to the after sale service. A standing ovulation to everyone whose contribution over the years have made 'MK Gold' not just a pump but a living embodiment of Quality, Cost Effectiveness, Reliability, Satisfaction and a Wide Range.

India is a country of huge numbers. So is the case with automotive water pumps. **MK Gold** is one of the **largest of the manufacturers**.

Shot blasting is done for the Surface Treatment of the casting, removing all the impurities. It is coated with **Rust Preventive Oil**. After our **Multi-Stage Cleaning process**, Housing is checked using gauges, before it is sent for machining.

Fine Cutting tools with Cutting Oil are used having High yield strength, High toughness and Bending strength.

We have a complete range of pumps for **HCV, LCV, Cars, Tractors, Earthmovers, Combine Harvesters, and Spares**.

We believe in creating **Benchmarks** through the relentless efforts of our highly skilled teams at each stage of our production processes, which keeps us ahead of our competitors.

OE Standards are the basis of all our products.

Our organization is an **Employee friendly place**, taking care of all aspects of a healthy work environment. We believe that healthy and happy workers are our greatest asset.

At **MK Gold**, our **Research and Development team** works tirelessly to keep up with Innovations, globally.

The **Quality Control team** minutely inspects and tests all products, at every stage of manufacturing, for their Efficiency and Working.

OUR 'MANTRA'

We deliver **Pan India and the World** is our limit.

Our team lives up to the expectations of our customers, both **Quality and Quantity** wise.

CNC machine is programmed to perform Accurate and Precise functions using multiple tools. **Tapping and Drilling** is performed by the **VMC** machine which is used to provide top quality.

The result is a quality product meeting the **finest standards** in the industry.

Hardness Test is carried out.

EN8 steel rods are cut on **Fully Automatic cutting machines** as per the required size for the shaft. It is free cutting steel, best suited for making shafts having High hardness, High corrosion and Heat resistance, and great tensile strength.

High Performance Unitized Seals are used and **Leakage tests** are carried out on multiple stages.

2RS Ball Bearings and **Integral Shaft Bearings** are fitted in our pumps.

The Rammer Tool gives accurate size for the bearings to be fitted perfectly.

Duplicates are rampant in our line of product but as users know that water pump is the heart of the engine so quality matters and cost should not be the basis of choosing our product.

NOTES:

GUIDELINES FOR REPLACING WATER PUMPS

1. Engine has to cool down completely.
2. Follow the vehicle manufacturer's instructions to remove the belt drive system components.
3. The hose attached to the water pump is removed. A large quantity of coolant can pour out while you are doing this.
4. The bolts are loosened then the old water pump is removed.
5. Clean the mounting surface, after removing the old seal, gasket or sealant.
6. Inspect the following before installing the new water pump- coolant hose, thermostat and pressure cap.
7. Install the new water pump but be careful not to force the pump in by striking the pump shaft.
8. Replace the old gaskets with new ones.
9. Follow all installations instructions carefully.
10. Apply sealant only if specifically recommended by the vehicle manufacturer.
11. Apply sealant as much as needed.
12. Wipe off any excess sealant, as too much sealant prevents the correct installation of the water pump.
13. Follow the manufacturer's torque specifications to tighten the bolts. Re-attach the hose.
14. Fill the cooling system with the coolant, recommended by the vehicle manufacture.
15. Manually rotate the pump. Make sure it rotates freely.
16. Since the belt drive system and the water pump work together so it is important to ensure that the belt drive system is in perfect condition and installed.
17. Do a visual inspection for any leaks after the cooling system is refilled.

WE HAVE A WIDE RANGE

AMBASSADOR

WARRANTY

MK Gold is a brand that believes in quality. Our products undergo stringent quality check. We replace the pumps if there is any manufacturing defect only. Any other cause of failure is not covered. Improper installation, engine failure, loss of life or property is Not Covered under the Warranty.
